November 2022

PERFORMANCE ASSESSMENT OF SAN JOSE COMMUNITY HIGH SCHOOL SENIOR HIGH SCHOOL TECHNICAL VOCATIONAL LIVELIHOOD TRACK TEACHERS FOR THE SECOND SEMESTER OF SY 2021-2022 UNDER THE LIMITED FACE-TO-FACE LEARNING MODALITY

Abstract

Purpose: This study sought to determine the level of performance of SHS- TVL track teachers at San Jose Community High School (SJCHS) in the second semester of school year 2021-2022. The results of the study will help plan for the conduct of further professional activities for teachers' professional growth

Design/Methodology/Approach: This study is a quantitative research that used the descriptive analysis research design. Applying the Total Enumeration Sampling Technique, which is a non-probability sampling, this study involved all of the fifteen (15) Senior High School teachers of SJCHS.

Findings: The average rating of SHS-TVL teachers are fairly distributed; (b) About 75% of teachers reached level 6- Consolidating; (c) In the rating of SHS teachers in each indicator, the highest rating is indicator number 3 while the lowest rating is indicator number 1; (d) Most of the comments given by classroom observers in their Observation Notes were positive; and (e) "Contact parents to inform them of students' progress" is the top most technical assistance given by observers.

Research Limitations/Implications: This study only focused on the performance assessment of SJCHS SHS-TVL Track teachers for the second semester of SY 2021-2022 under the Limited Face-To-Face learning modality.

Originality/Value: This study was the first of its kind conducted in SJCHS under the Limited Face-to-face learning modality in which new and different scheme is being utilized. The results served as bases for an intervention to upgrade professional skills of teachers.

Keywords: *Performance Assessment, Limited Face-To-Face Learning Modality, SHS-TVL Track*

Acknowledgement

The researcher would like to acknowledge and bring back all the glory, honor and thanks to God, our ever-loving Father who moved in the hearts of the following persons who helped the researcher in the completion of this study.

All the fifteen SHS teachers of San Jose Community High School in the municipality of Gen. Mariano Alvarez who provided the research proponent copies of their students' grades in the second semester of SY 2021-2022 under the Limited Face-To-Face Learning Modality;

Ms. Shekinah Ginel C. Bencito – the researcher's daughter, who contributed much of her effort in the preparation of the Review of Related Literature part of this research;

Mr. Guillermo A. Beringuel, Jr. – the SHS Administrative Officer II of SJCHS who assisted the researcher in following up with the teachers in the collection of data;

Mrs. Elizabeth B. Dizon – MRC Secretariat of GMA, the Master Teacher II of SHS - Mrs. Raquel D. Domingo, the ICT Coordinator - Mr. Michael O. Sol who assisted the researcher in any way possible and the whole administration and staff of San Jose Community High School;

Mrs. Mary Jane L. Hermoso – the Administrative Assistant II of Lucsuhin Integrated School who assisted the researcher in anyway asked of her for the completion of this study;

Ms. Emmalyn M. Legatub (Head Teacher III), Mrs. Nerissa D. Mamanao (Teacher III) and Ms. Joymee M. Vidallon (Teacher I) of Lucsuhin Integrated School who helped the researcher prepare the infographics and the video recording for the presentation of the research in the municipal colloquium as well as in the division conference.

Mrs. Alma D. Acuña – Salik-Suri Coordinator/Alfonso MRC Vice President and SHS Master Teacher of Lucsuhin Integrated School who aided the researcher in the transition of the research from the previous municipality to the current one (from GMA to Alfonso);

The DepEd Division of Cavite Province Planning and Research Senior Education Program Specialist - Ms. May Anne Joy Romanes, the two (2) Public Schools District Supervisors of the DepEd Cavite Alfonso Extension Office – Dr. Alicia P. Francisco and Dr. Florencia B. Gloriani;

The family of the research proponent – Pastor Joel, Shekinah and Gabriel who showered her with love, inspiration, joy and understanding.

To them all, this work is dedicated.

GINA C. BENCITO, Ph. D.

Introduction and Rationale

It is generally acknowledged that promoting teacher quality is a key element in improving primary education in the Philippines. Indeed, one of the primary goals of the No Child Left Behind Law is to have a “highly qualified teacher” in every classroom. We focus here on the relationship between teacher productivity and teacher training, including formal pre-service, in-service professional development, and informal training acquired through on-the-job-experience.

Educators nowadays have very different functions and roles compared with their tasks before the pandemic. Instead of directly monitoring the learning of the students, teachers need to set a feedback mechanism while seeing the connection of one lesson to the next to reinforce the coherence of the curriculum. In this New Normal educational set-up, timely and appropriate monitoring and feedback for consultation and intervention purposes are very essential for the teachers to perform through various touch points such as text messaging, and audio/video calls whichever is accessible to the learners. Moreover, they need to strategize for learners’ engagement as often as possible either by sending them instant messages or a bullet pointed summary of what is expected of them, or by conducting a quick survey every week to monitor learners’ difficulties and to see how they have been progressing in the lesson.

Teacher evaluation is primarily conducted for purposes of improving curriculum and instruction. It is usually conducted with certain tool in assessing different criteria that characterizes a qualified professional teacher. School heads take responsibility conducting teacher evaluation for promotion purposes, instructional improvement or curriculum planning and development. This teacher evaluation continuously takes place every year for instructional improvement, promotional purposes and any time as needed for curriculum planning and development.

In the previous years, teachers were being rated by different performance rating tool such as Performance Appraisal System for Teachers (PAST), Competency-

Based Performance Appraisal System for Teachers (CB-PAST) and in the recent school year before the pandemic, teacher's performance was being evaluated using the Results-based Performance Management System (RPMS) - Philippine Professional Standards for Teachers (PPST) in which there were Classroom Observation Tools (COT) being used to assess classroom performance of teachers. Classroom observation is a process of providing feedback to a teacher's classroom practice. Feedback given provides a quality input for the continuous improvement of teacher practice and provides opportunities to share ideas and expertise. To be more effective, classroom observation must be based on a set of standards, which can assess teaching quality across a continuum of development (Darling-Hammond, 2012). The link between what the teachers can do as evidenced by their classroom performance and the standards against which this performance can be rated or evaluated is crucial in classroom observation. The COT-RPMS are composed of these forms: Rubric, Observation Notes Form, Rating Sheet and the Inter-Observer Agreement Form. Each form is used at a specific stage in the observation process. Since there is no classes conducted in literal classrooms these days, and therefore, there is no such thing as classroom observation to rate teachers' performance in this new normal set-up, among the COT-RPMS forms, it is only the Observation Notes Form which could still be utilized when monitoring classes conducted through any kind of distance learning modality. The observers use this form to take note of his specific observations and comments during class monitoring. Same as that of the old normal, this is the only form the observers would complete during the observation.

In the study conducted by the researcher in SY 2018-2019 entitled: "Classroom Performance Assessment of San Jose Community High School Teachers : Basis for School Learning Action Cell (SLAC) Implementation, she found out that more than 50% of the teachers are in Level 6– Consolidating, in their classroom performance but this result of her study was in the old normal set-up. If the pandemic had not come, the researcher is supposedly to propose a whole package of in-service trainings or

SLAC that would discuss concepts pertaining to the performance indicators of COT-RPMS which were found to be with low rating among the classroom performances of SJCHS teachers (Bencito, 2019). But because of the Better Normal set-up in educational system, the result of the previous research study appeared to lose its significance in developing in-service trainings for teachers.

The researcher felt the need to conduct this study because its result will help her plan for the conduct of further professional activities for teachers' professional growth. It will also challenge teachers' capacity to give quality education even in this new normal educational setting.

Literature Review

Coronavirus Disease (COVID-19)

According to the World Health Organization (2020), Coronavirus disease, usually known as COVID-19, is "an infectious disease caused by a newly discovered coronavirus", which has something to do with Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV) because of its fatality (Meng, Hua, & Bian, 2020). It can mainly spread by droplets of saliva or discharge from the nose of an infected person who coughs or sneezes. Because of the presence of different COVID variants and being a highly contagious disease, its large-scale outbreak was already considered as a pandemic, that Madhav et al. (2017) believed to increase the mortality rate and morbidity rate of the population, especially the low- and middle-income countries. Given that our country, Philippines, is included in those countries, it is not surprising that the number of total cases is still evident nowadays. Figures 1 and 2 show the current total number of cases nationwide and Cavite province, respectively, including the number of active cases, recovered, and deceased because of this infectious virus.

Figure 1. Updated number of cases in the Philippines as of March 1, 2022.

Source: Department of Health (2022).

Figure 2. Updated number of cases in Cavite as of March 1, 2022.

Source: Department of Health (2022).

The outbreak of this pandemic resulted in a huge disturbance globally wherein travel bans (DFA, 2020), political conflicts (Barrios & Hochberg, 2020), racism (Habibi et al., 2020), misinformation dissemination (Enitan et al., 2020), loss of job (Parker, Horowitz, & Brown, 2020; Yumol, 2020), changes in consumer behavior (Donthu & Gustafsson, 2020), and others. Considering these, the country accepted some clinically tested and proven vaccine from other countries and started giving out vaccines to the people from March 1, 2021 to present. This is done not only to lower the risk of acquiring and spreading the virus but also to help avert serious illness and death (Centers for Disease Control and Prevention, 2022). Figures 3 shows the updated COVID vaccination status and the priority group breakdown of vaccination in the country.

Figure 3. Updated vaccination status in the Philippines as of February 21, 2022.

Source: Department of Health (2022).

Due to the continuous declination of COVID-19 cases in Cavite, the national government placed the province under Alert Level 1 from March 1 to 15, 2022 based on the Inter-Agency Task Force for the Management of Emerging Infectious Diseases (IATF-EID) recommendations (Abrina, 2022). According to IATF-EID, provinces under this level have no restrictions in terms of indoor and outdoor capacities for business establishments.

Education system in the New Normal

According to the Department of Education (2020), the Learning Continuity Plan (LCP), which is enclosed in DepEd Order No. 12, s. 2020 will be used for basic education. Figure 4 shows the algorithm for learning delivery modalities of San Jose Community High School. It can be seen that the options of having online/offline learning, which is having no face-to-face interaction and is fully digitalized, and modular learning, a distance learning for students with no internet access, is utilized in the LCP. Moreover, assessment and evaluation is mainly considered to find out the success of the program. (DepEd Cavite, 2022).

Figure 4. SJCHS Algorithm for Learning Delivery Modalities

Students who choose modular learning do their activities and outputs in a printed format that will be used to assess their academic performance. Those students who are near to each other's location will be grouped together and will be managed by the faculty in-charge residing near them.

Grade Level	Online learning only	Television Only	Radio Only	Modular Learning (Printed)	Modular Learning (Digital)	Blended	TOTAL
Grade 7	40	0	0	324	14	69	447
Grade 8	47	2	0	414	19	79	561
Grade 9	51	0	0	414	16	79	560
Grade 10	56	0	0	432	25	82	595
Grade 11	46	1	0	463	17	78	605
Grade 12	41	2	1	439	13	72	568
TOTAL	281	5	1	2,486	104	459	3,336

Figure 5. SBE-LCP survey result for learner's selected learning modality in S.Y. 2021-2022.

Figure 5 shows learner's selected modality in SJCHS is modular learning which comprises of 2,590 out of 3,336 individuals (77.63%), thus making it as the most selected modality in SJCHS and making the modular learning to be considered as the "backbone" of the DepEd's distance learning program (Magsambol, 2020).

On November 2020, the Department of Education suggested measures to promote academic ease to help the teachers and learners who are still adapting to the distance learning set-up, which were later on approved by President Duterte and the Cabinet. However, this can only be applied if all of the conduct of pilot face-to-face classes can only be implemented by areas with low COVID-19 risk and the participation of the learners is voluntarily and must be permitted by the parents. Considering that majority of the population is already fully vaccinated (57.6%) as of February 28, 2022 (Department of Health, 2022), the possibility of conducting limited

face-to-face classes in San Jose Community High School has increased.

Technical Vocational Livelihood (TVL) Track

According to Online Senior High School (2021), the TVL track is designed for students who prefer to start working right away after graduating from senior high school. This track provides students the relevant skills and knowledge that they need in order to secure the Certificate of Competency (COC) and National Certifications (NC) that they submit for work, especially if it is related to electronics, agriculture, or trading (Nucum, 2018). Moreover, this track is beneficial to be taken for those students who plan to work abroad as skilled workers. There were seven TVL track specializations available in San Jose Community High School. These are the Travel Services, Information and Communications Technology (ICT), Bread and Pastry Production, Tailoring, Food and Beverage, Computer System Servicing, and Front Office Services.

Figure 6. Average Grade Percentage Per Strand/Track of SJCHS SHS in the S.Y. 2019- 2020 Under Modular Distance Learning Modality.

Figure 6 shows that the TVL track garnered the lowest average grade percentage in both Grade 11 and Grade 12 level among the strands and track offered by the school under the modular distance learning modality. Bencito (2021)

revealed that this is because TVL strand need much more practical and on-site learning and on-the-spot experience compared to the other strands, which is more adaptable under the modular distance learning modality. Considering these, the performance of the students taking the TVL strand was greatly affected by the abrupt change in learning system, thus preventing them to fully grasp the concepts and to develop their skills.

Dangle and Sumaoang (2020) mentioned that up to seventy percent (70%) of the learners cannot easily follow the instructions on their own while Orendain and Djalante (2020) emphasized the need for the learner's access to the right equipment and technology to better acquire knowledge and hone their skills.

Performance Assessment of High School Teachers in the Normal

The demand for highly qualified and effective teachers is continuously increasing for the improvement of the learners' academic performance. However, just being 'highly qualified', which is having the certificates and qualifications, does not automatically assure that the teachers are highly effective (Little, Goe, & Bell, 2009), which is an important factor in improvement of student learning; hence the importance of having teachers' evaluation and assessment in teaching. Sawchuk (2015) defined teacher evaluation as the formal and recognized process that was used by schools to observe, critique, and grade teachers based on their performance and efficacy in the classroom. The result of this evaluation will be used to give a response to teachers and make them aware of the things that they need to tweak for the betterment of their professional teaching, wherein findings of Mahgoub (2014) and Caluza et al. (2017) revealed that teachers have significantly improved their performance because of its development by having a very satisfactorily professionalism, commitment, expertise on the subject, teaching for independent learning, and management learning, resulting in a positive impact on student's interest and motivation in learning.

Before the pandemic, teachers were evaluated using classroom observations, principal evaluation, portfolios, self-report of practice, and student evaluations (Little, Goe, & Bell, 2009). Classroom Observation Tool - Results based Performance Management System (COT-RPMS), which is defined as a subset/rubric that has a performance continuum for each career stage (Bencito, 2019), was also used.

Research Questions

The main thrust of the study is to find out the level of performance of SHS- TVL track teachers at San Jose Community High School in the second semester of school year 2021-2022. This paper attempted to answer specific questions such as:

1. What are the teachers' level of performance as revealed by the Classroom Observation Tool (COT) Rating Sheet and Observation Notes?
2. What are the teachers' level of competencies as revealed by the findings and technical assistance given to them in the Instructional Supervisory Report?
3. What further professional activities for teachers' professional growth could be initiated to improve their level of performance?

Scope and Limitation

The focus of this study is the performance of SHS-TVL track teachers at San Jose Community High School in the municipality of Gen. Mariano Alvarez, Division of Cavite Province for the second semester of school year 2021-2022.

Research Methodology

A. Sampling

This study included fifteen (15) teachers comprising 100 percent of the total number of SHS teachers who teach the TVL track students of San Jose Community

High School under the Limited Face-To-Face Learning Modality. This study applied the Total Enumeration Sampling Technique, instead of Purposive Sampling Technique, to determine the total number of respondents. According to the Australian Bureau of Statistics (2020), a complete enumeration, also known as census, means a complete count (i.e., a study of every unit, everyone or everything, in a population). Hence, in this study, the researcher identified all the teachers teaching the SHS-TVL track students.

B. Data Collection

In this study, the following factors were taken into consideration: a) Teacher's Performance based on his/her Classroom Observation Tool (COT)-Rating Sheet and Observation Notes; and b) Teachers' Performance based on the Instructional Supervisory Report accomplished by his/her school/department head.

- A. Classroom Observation Tool – Results Based Performance Management System (COT-RPMS) is a subset of the full Classroom Observation Tool used for RPMS for teachers. The rubric contains a performance continuum for each career stage. For Teacher I-III (with levels 3-7), the expected attained level is at least Level 6 – Consolidating.

Rubric Level Summary

Level	Level Name	Description
3	Organizing	The teacher demonstrates a limited range of loosely associated pedagogical aspects of the indicator.
4	Developing	The teacher demonstrates a range of associated pedagogical aspects of the indicator that sometimes align with the student developmental learning needs.
5	Applying	The teacher demonstrates a range of associated pedagogical aspects of the indicator that usually align with the student developmental learning needs.
6	Consolidating	The teacher uses well connected pedagogical aspects of the indicator consistently aligned with the student development that supports students to be successful learners.
7	Integrating	The teacher uses well connected pedagogical aspects of the indicator to create an environment that addresses individual and group learning goals.

- B. Instructional Supervisory Report is a report accomplished by school heads monthly. Primarily, it contains observations done by the principal or head teachers during the whole month. It gives information on the name of the teacher, class being observed, including the subject area, time and duration it was observed and most importantly,

the findings, comments, remarks, suggestions, recommendations of the observer in the form of Technical Assistance given. Technical Assistance is a form of professional help, guidance or support given by class observers for teachers to be more effective in the performance of their functions.

C. Ethical Issues

Permission was sought from the respective participants. The researcher affirmed that the purposes, methods, and possible uses of the research are known to the participants. Results of data and information will be treated confidentially.

D. Data Analysis

This study used the descriptive analysis research design. The main objective is to discover the performance of teachers based on Instructional Supervision and the nature of the situation as it exists and identifies the causes. Descriptive method is used to gather information about the present existing condition. All the data that were gathered were analyzed using the following statistical methods and techniques:

The Classroom Observation Tool (COT) Rating Sheet and Observation Notes.

To determine Teachers' Performance in San Jose community High School based on their COT-Rating Sheet and Observation Notes, the frequency, mean and percentage were used. Frequency count was used to determine the number of observations that fell on a given category. Mean is one of the most useful and widely used method to find out the average in statistics.

Formula: Mean

$$\bar{X} = \frac{\sum X}{N}$$

Where:

Σ = represents the summation

X= represents scores

N=represents number of scores.

Percentage was used to determine the percent of the total observations falling under a given category. The formula for percentage is

$$P = \frac{f}{N} \times 100$$

N

Where:

P = Percentage

f= Frequency

N = Total number of respondents

Instructional Supervisory Report. To determine the teachers' level of competencies as to Technical Assistance given by their school heads, frequency count was used to determine the number of observations that fell on a given category.

Discussion of Results and Recommendations

This part includes the presentation, analysis, and interpretation of the data gathered from fifteen (15) senior high school teachers of San Jose Community High School. The main thrust of the study was to find out their competencies in classroom teaching as to COT-RPMS Rubric and Instructional Supervisory Report. The data were presented in tabular and textual form. The findings of the study were based on the obtained data, which were analyzed in accordance with the methods and procedures previously discussed herein.

Table 1. Teachers' Classroom Performance as to their COT 2 - RPMS Rating Sheet

NO.	NAME OF TEACHERS	AVERAGE RATING	RUBRIC LEVEL
1.	R. Domingo (MT II)	7.2	Integrating
2.	R. De Salit	7	Integrating
3.	R. Ponce	7	Integrating
4.	T. Gonzales	7	Integrating
5.	E. Alfonso	7	Integrating
6.	M. Ambunan	6.8	Consolidating
7.	J. Hipolito	6.4	Consolidating
8.	K. Breis	6.4	Consolidating
9.	A. Mase	6.4	Consolidating
10.	A. Castillo	6	Consolidating
11.	G. Viernes	5.8	Applying
12.	D. Barcelona	5.8	Applying
13.	K. Rolle	5.6	Applying
14.	S. Prestado	5.6	Applying
15.	N. Valenciano	5	Applying

Table 1 shows that the average rating of SHS-TVL teachers are fairly distributed having five (5) teachers for each rubric level – Integrating (5), Consolidating (5); and Applying (5). This shows that 75% or 10 out of 15 teachers reached the expected attained level of at least 6-Consolidating. About five (5) teachers even surpassed the expected attained level of 6 by garnering an average rating of 7-Integrating. Moreover, there are only five (5) teachers who failed to reach the expected attained rubric level of 6-Consolidating but then all of their rating is very much near the expected level of 6-Consolidating : 5.8 (2); 5.6 (2); and (5) respectively. Additionally, based on the table above, there was no teacher who got level 3- Organizing and level 4- Developing which means that there is no SHS teacher in SJCHS who demonstrate a range of associated pedagogical aspects of the indicator that sometimes align with the student developmental learning needs (level 4) nor teachers who demonstrate a limited range of loosely associated pedagogical aspects of the indicator (level 3). Likewise, it shows that SJCHS SHS teachers use well connected pedagogical aspects of the indicator consistently aligned with the student development that supports students to be successful learners (level 6). Furthermore, about five (5) teachers even attained the highest rubric level of 7- Integrating by using well-connected pedagogical aspects of the indicator to create an environment that addresses individual and group learning goals.

Table 2. Teachers' COT 2 - RPMS Rating Per Indicator

INDICATORS	SHS TEACHERS															
	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	Ave.
1. Apply knowledge of content within and across curriculum teaching areas.	7	5	5	6	7	7	5	7	5	5	5	7	5	7	7	6
2. Display proficient use of Mother Tongue, Filipino and English to facilitate teaching and learning.	7	6	6	6	7	7	6	6	6	6	5	7	6	7	7	6.33
3. Use effective verbal and non-verbal classroom communication strategies to support learner understanding, participation, engagement and achievement.	7	6	5	6	7	7	7	7	7	6	5	7	6	7	8	6.53
4. Establish safe and secure learning environments to enhance learning through the consistent implementation of policies, guidelines and procedures.	7	6	6	6	7	7	7	6	7	6	5	7	6	7	7	6.47
5. Maintain learning environments that promote fairness, respect and care to encourage learning.	6	6	6	6	7	7	7	6	7	5	5	7	6	7	7	6.33

Table 2 presents the rating of SHS teachers in each indicator. It can be observed that the highest rating is indicator number 3 : “Use effective verbal and non-verbal classroom communication strategies to support learner understanding, participation, engagement and achievement” with an average rating of 6.53, while the lowest rating is indicator number 1 : “Apply knowledge of content within and across curriculum teaching areas” with an average rating of 6. But then, other indicators (numbers 2, 4, and 5) also registered an average rating within rubric level 6- Consolidating and some, nearly rubric level 7- Integrating (numbers 3 and 4). Considering that this COT 2 is taken during the Limited Face-To-Face Learning Modality, which is during the second semester of stock-still pandemic school year 2021-2022, it was really difficult to manifest application of knowledge of content within and across curriculum teaching areas.

Table 3. Top 5 Comments By The Observers As Per Observation Notes Of The COT 2-RPMS

Rank	Comments By The Class Observers Indicated in the Observation Notes	Frequency
1	Positive social interaction between teachers and learners	12
2	Well prepared instructional materials / Variety of instructional strategies	11
3	Mastery of the subject matter	10
4	Good classroom management and discipline	7
5	Effective use of language as medium of instruction / Safety guideline and practices in doing the learning tasks	6

Table 3 shows the top 5 comments of class observers taken by the researcher from the Observation Notes of SHS Teachers' COT 2. As seen in the table, most of the comments given by the class observers were positive. About twelve (12) teachers out of the total of fifteen (15) received the rank 1 comment : "Positive social interaction between teachers and learners"; eleven (11) teachers were witnessed to have "well-prepared instructional materials" and/ or with "variety of instructional strategies"; at least ten (10) of them were spotted to have "mastery of the subject matter"; seven (7) were perceived to exhibit "good classroom management and discipline"; and there were six (6) teachers who were noticed to demonstrate "effective use of language as medium of instruction" and established "safety guidelines and practices in doing the learning tasks."

Table 4. Technical Assistance Given By Classroom Observers As Revealed By The Instructional Supervisory Report

Rank	Technical Assistance	Frequency
1	Contact parents to inform them of students' progress / use all other means to connect to them	4
2	Remind students to come to class on time, refrain from tardiness and absenteeism / Find out their reasons for being absent	3
2	Encourage all students to participate in the discussion	3
2	Follow-up on students who could not cope up with the lesson/ Follow-up graduating students	3
3	Continue to be patient in dealing with those students whose outputs were incomplete or no outputs at all / Allow online submission of outputs	2
3	Explain instructions further / give follow-up instructions	2
3	Monitor if students really work on their outputs / ask them to present MOVs	2
3	Do Home Visitation if necessary	2

Table 4 above shows Technical Assistance given by classroom observers in form of providing suggestions or advices for the improvement of the teachers' conduct of classes. From several comments and suggestions, the researcher consolidated the concepts into few items only taking into consideration the frequency as it occurs in class observation. Rank number 1 : "Contact parents to inform them of students' progress / use all other means to

connect to them” appeared four (4) times in the Instructional Supervisory Report (ISR) as technical assistance provided as classroom observers do their classroom observation. Three (3) of the items such as “Remind students to come to class on time, refrain from tardiness and absenteeism / Find out their reasons for being absent”; “Encourage all students to participate in the discussion”; and “Follow-up on students who could not cope up with the lesson / Follow-up graduating students” appeared three (3) times in the ISR. The remaining four (4) items were also seen in the ISR but twice each only.

Conclusion

The following conclusions were drawn from the findings of the study:

1. Using the COT-RPMS Rating Sheet, it could be concluded that:
 - a. The average rating of SHS-TVL teachers are fairly distributed having five (5) teachers for each rubric level – Integrating (5), Consolidating (5); and Applying (5).
 - b. About 75% or 10 out of 15 teachers reached the expected attained level of at least 6- Consolidating and five (5) teachers even surpassed the expected attained level of 6 by garnering an average rating of 7-Integrating, then there were only five (5) teachers who failed to reach the expected attained rubric level of 6-Consolidating.
 - c. In the rating of SHS teachers in each indicator, the highest rating is indicator number 3 : “Use effective verbal and non-verbal classroom communication strategies to support learner understanding, participation, engagement and achievement” while the lowest rating is indicator number 1 : “Apply knowledge of content within and across curriculum teaching areas.” But then, other indicators (numbers 2, 4, and 5) also registered an average rating within rubric level 6- Consolidating and some, nearly rubric level 7- Integrating (numbers 3 and 4).
 - d. From the top 5 comments of class observers written in their Observation Notes of SHS Teachers’ COT 2, most of the comments they gave were positive.
2. Using the data from the Instructional Supervisory Report, it could be concluded that:

- a. Among the technical assistance given by observers in the conduct of class observation, one (1) concept surfaced the most in the observations done :
“Contact parents to inform them of students’ progress / use all other means to connect to them”.

Recommendations

Relatively, the recommendations are : conduct of Learning Action Cell (LAC), Focus Group Discussion (FGD), Job Embedded Learning (JEL) and other professional activities that would improve teachers’ performance especially for those who failed to attain the expected rubric level of 6- Consolidating. Another plan in mind is a program to encourage and further motivate teachers to continue their positive characteristics perceived from them in the conduct of class observation.

Dissemination and Advocacy

Dissemination and utilization of research results are crucial in the achievement of learning outcomes, and improve the teaching-learning and governance processes. The results of this study will be discussed to the SHS teachers of the school. The completed research shall be presented to the research conferences from the district level to the division level and if accepted to the regional, national or even in the international conferences. It shall be utilized in the place of study, particularly at San Jose Community High School. As its offshoot, the researcher can formulate policy development specifically training proposals for SLAC based on the results of this study.
