DEDICATION

As the researchers do the research paper, it takes a lot of time and effort to successfully finish it. This is possible because of the people who truly believes in what we can do and support us all throughout the journey.

We dedicate everything to our Almighty God for He is good and showered us with wisdom and knowledge to effectively do this research paper. To our family and friends who encourage and supports us all the way to have a better outcome of the study. Lastly, to the diligent researchers who are firm to help and give their full effort for the success of the group.

We want to take this very opportunity to thank our research teacher who gave her effort to guide us and correct us with gentleness in everything as we are doing this paper.

ABSTRACT

The general objective of this research is to identify the social media usage of Grade 12 Fidelis Senior High Students and their acquired effective communication skills predominantly in their verbal, non-verbal, and written communication skills. The researchers selected the most appropriate design for the study which is quantitative research, specifically the descriptive research design which aims to accurately and systematically describe a population, situation, or phenomenon. The target respondents of this study will come from Grade 12 Fidelis Senior High STEM, ABM, HUMSS, TVL, SPORTS, and ARTSDES students. The total population of Grade 12 FSH students is 1115 in which 637 respondents were identified through the use of stratified random sampling which involves division of population into smaller groups or strata and Slovin's formula which calculate the appropriate sample size from the population. Survey questionnaire will be used as the research instrument of this study. A total of a twenty-item (20) survey questionnaire will be used to answer and determine how social media usage impacts the respondents' effective verbal, non-verbal, and written communication skills. In order to identify the result of Grade 12 students' effective communication skills acquired and their usage of social media, the researchers will be using weighted mean.

CHAPTER 1

THE PROBLEM AND ITS BACKGROUND

This chapter presents the introduction, statement of the problem, significance of the study, scope and delimitation, theoretical and conceptual framework, and definition of terms.

Introduction

Technology influences the way people interact, read, and think. In society today, it plays a significant role (Allen, 2019). Living in the 21st century, digital devices have made our lives apparently easy wherein we use different social media platforms to communicate effectively.

Social media is a wide online platform for many people that can help with their daily lifestyle. According to Clement (2020), in more than a decade, the impact of social media has gone from being a fun addition to being a completely integrated portion of almost every aspect of life. The influence of social media is such that by 2023, the number of global users is projected to exceed some 3.43 billion monthly users, around a third of the total population of the planet. Bhamare (2020) added that the emergence of social media has created a new venue for facilitating daily information and communication needed. By using social media in various ways of communication, it helps to create opportunities to

interact with other people easily by sharing information. Therefore, social media is steadily but surely impacting the way people live and communicate with one another.

People are very much aware that communication is the life blood of existence and realize how important it is in their lives. Communication is not technically just about exchanging information. It is more about being able to understand the emotion and intentions behind the information. To communicate well is to understand, and be understood (Bequiri, 2017). A vital life skill and one that should not be underestimated is the ability to convey information correctly, simply and as expected. Being able to clearly convey a message or listening in a way that makes the other person feel heard and understood. By learning these, it can deepen your connection to others, build greater trust and respect, and overall social & communication health.

In a student's perspective, predominantly to Grade 12 Fidelis Senior High students, social media plays an important role and becomes a communication tool for them. They use social media to communicate with their classmates and teachers. In addition, using social media may develop effective communication skills. By the advent of social media, a new way to promote everyday knowledge and connectivity needs has been enabled. On the other hand, as described, communication skills are an important tool for individuals to effectively transmit or receive messages and information in a clear and concise manner. Effective communication requires learning some important skills (SkillsYouNeed, 2020). Furthermore, developing communication skills can help all aspects of life, from the professional life to social gatherings and everything in between.

The researchers want to determine the impacts of social media in terms of students' effective communication skills. Moreover, researchers ought to know their preferred social

media platform. As a result, the study aims to identify the effective communication skills of Grade 12 Fidelis Senior High students and their usage of social media.

Statement of the Problem

This quantitative research study purposely intends to determine the impacts of social media usage on effective communication skills of Grade 12 Fidelis Senior High Students. Predominantly, the study aims to answer the following questions:

1. What are the social media platforms do the respondents use?
2. In what way does the respondents use social media in effective:
 - a. Verbal,
 - b. Non-verbal, and
 - c. Written communication skills
3. What are the impacts of social media usage to the respondents in terms of effective communication skills?

Significance of the Study

According to *DiscoverPhDs*, the significance of the study is a written statement that explains why the research is necessary. It is a justification for the importance and its effect on the field of research, its contribution to new knowledge, and how it can benefit others.

Considering the social media platforms that the respondents use and how it may lead to their effective communication skills. This research study intends to figure out the impacts of social media usage on effective communication skills of Grade 12 Fidelis Senior High students. The findings of the study will be redounded to the benefit of the following.

Student-researchers. This study allowed them to discover important areas that other researchers have not been able to explore.

School body. The outcome of the study will let the school know and be aware on how social media impacts their students in terms of effective communication skills.

Future researchers. This research study can serve as their future reference in their research study. As well as, other educational purposes.

Scope and Delimitation

Two components of a research paper are the scope and delimitation of the research, which tells the reader what information is used in the research and explains why the author/s chose that information. Although scope and delimitation clarify the restricted nature of a report, this data adds credibility to science (Refugio, 2018). This addresses the study's scope and determines the process limitations. Furthermore, this also addresses what the researchers do not want to do.

This study concentrates to the impacts of social media usage on effective communications skills of Grade 12 FSH students. To obtain the necessary information that

would solve the research problem, the researchers prepared survey questionnaires. First, knowing the social media platforms that the respondents use. Second, determining in what way does the respondents use social media for effective verbal, non-verbal, and written communication skills. Third, knowing the impacts of the respondents' usage of social media towards effective communication skills. In Fidelis Senior High, mainly Grade 12 students from different strands, will be the chosen respondents for this study.

The delimitation, according to Oxford Learner's Dictionary, is the boundary or limits of the study. The study does not include the visual communication skills of the students. As stated, the respondents of this study will only be Grade 12 Fidelis Senior High students. With that, Grade 11 students will not be included as respondents. Also, the study does not cover other skills which are connected and acquired with the usage of social media.

Theoretical Framework

The backbone of this study is guided by an Archetypal Theory—Goffman's symbolic interactionism. This concept is selected for its potential relevance to the usage of social media on effective communication skills:

Goffman's presentation of self

Erving Goffman's *The Presentation of Self in Everyday Life*, published in 1959, provides a detailed description and analysis of process and meaning in mundane interaction which introduces the "way to present". Regardless of the particular objective which the individual has in mind and when an individual appears in the presence of others, there will

usually be some reason for him to mobilize his activity so that it will convey an impression to others which is in his interests to convey. Interaction is viewed as a "performance," shaped by environment and audience, constructed to provide others with "impressions" that are consonant with the desired goals of the actor. Goffman's book is therefore all about the appearance of action. The analogy of Cartesian dualism—between the thinking subject and the world as a space or territory that the subject will influence—is fully relevant. The relevant is confirmed by the fact that, "this control is achieved largely by influencing the definition of the situation which the others come to formulate."

In relation to the study's research problem, this theory of Goffman's presentation of self helps support and give comparison to the way a person present himself and the usage of social media in effective communication. Social media is like a theatre play where a person conduct a performance; plays a role. It is about self-presentation, impression management, attempting to act on accordance with the plan which can make a person an effective communicator.

Conceptual Framework

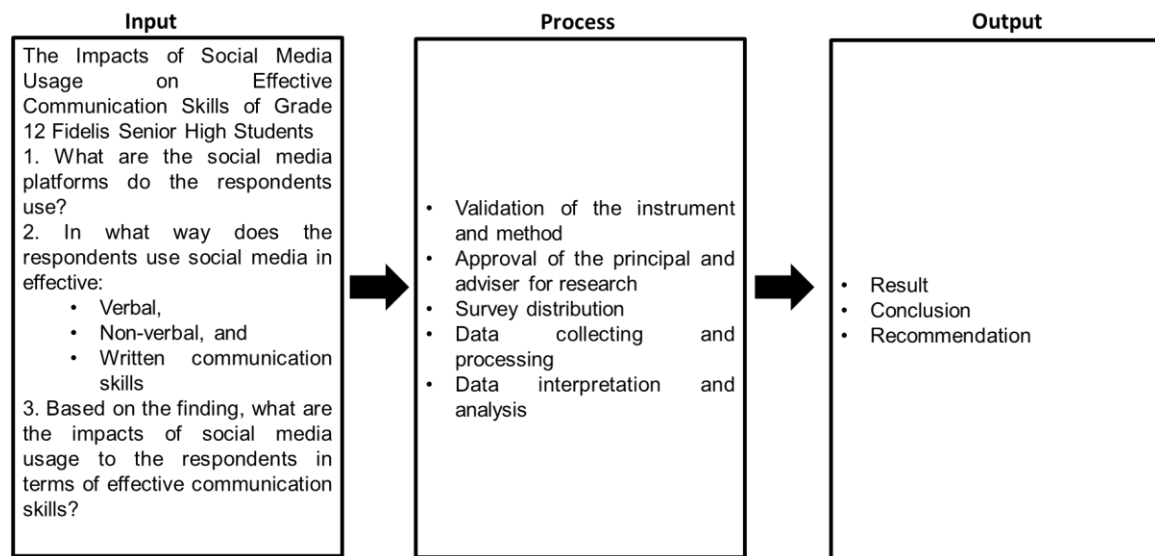

Figure 1. Conceptual Framework

The conceptual framework used input-process-output to present the variable being studied. The “input” variables were the social media platforms that the respondents used together with its impacts on their effective communication skills. The next box is the “process” variables which includes the instrument and method validation, survey questionnaires distribution, data gathering, and interpretation. The last part will be the “output” variables which is the result, conclusion, and recommendation.

Definition of Terms

An alphabetical list of significant terms or acronyms that you identify, particularly used terms (Harvard Extension School, n.d.). Definition of terms makes it easy to understand vague definitions of words that can otherwise be interpreted in various ways, these words should be clearly defined according to how they are used in the study (Thesis Notes, 2009).

Archetypal Theory. Archetypal criticism argues that archetypes determine the form and function of literary works. (Delahoyd, 2002)

Communication. According to the Merriam-Webster Dictionary, it is a process by which information is exchanged through a common system of symbols, signs, or actions between people. Thus, can be defined as understanding and sharing meaning (Bequiri, 2017). It is used as an introductory for this study.

Communication Skills. Is essential in order to rapidly and accurately deliver and interpret data. Being able to communicate easily is a crucial ability in life and should not be ignored (Bequiri, 2017). In this study, this is the dependent variable.

Effective communication. It's about understanding the emotion and intentions behind the information. As well as being able to clearly convey a message

Information. It is the information acquired from research, study or instruction. As well as, message received and understood.

Interactionism. a theoretical perspective that derives social processes (such as conflict, cooperation, identity formation) from human interaction.

Mass media. Mass media means technology that is intended to reach a mass audience. (Study.com, 2015)

Non-verbal Skills. the transfer of information through the use of body language including eye contact, facial expressions, gestures

Phenomenology. the science of phenomena as distinct from that of the nature of being (*Plato.stanford.edu*, 2003)

Skill. It is the ability to do something well (Oxford Dictionary, n.d.).

Social Media Platform. Known as the lovechild of the World Wide Web which comes in many forms such as blogs, forum, photo-sharing, social gaming, chat apps, and social networks (Clement, 2020). Specifically, those are Facebook, Twitter, Google+, YouTube, Instagram and a lot more. In this study, it is used to determine the social media platforms that the respondents use.

Theoretical Framework. It is the structure that can hold or support a theory of a research study. (USC Librarians, 2020)

Verbal Communication Skills. Effective skills in verbal communication require more than just talking. Verbal communication concerns both how you send messages and how they are interpreted by you (Doyle, 2020). In this study, it is one of the effective communication skills that the respondents acquire with the use of social media.

Written Communication Skills. According to Inc.com, written communication includes any kind of communication that allows the use of written word. In this study, it is one of the effective communication skills that the respondents acquire with the use of social media.

CHAPTER 2

REVIEW OF RELATED LITERATURE

This chapter provides a summary of the various articles, journals, and dissertations used as reference and guide throughout the study. The various documents serve as the foundation of giving initial ideas and/or knowledge with related subject matter. This includes conceptual and research literature, and synthesis.

Conceptual Literature

These include literature from books, journalism and other types of study-related or applicable content, but it is data-free or non-empirical material. To help and better appreciate the variables of the analysis, it aims to establish familiarity with current study.

According to Hopkins (2020), the world is getting smaller through the use of technology such as social media. No wonder that the widespread use of social media share thoughts, personal and professional stories and interactions which has a significant influence on how people communicate today in general (University of the People, n.d.). It is believed that it has an adverse effect on social skills and communication among adolescents. In addition, engaging in various forms of social media has become a routine daily activity for most children and adolescents (Fuller J, 2020).

Bhamare (2018) recognized that communication is constantly evolving, some people are used to seeing their friend's online avatar as if the face. Social media, as mentioned, can be a great educational tool for students. Thus, serves as an effective device for academic performances. Moreover, it helps to improve writing skills in a clear and

succinct way; in addition, this can also result to their social skills and the ability to use social media for educational purposes (Bruce, 2020). Hopkins (2020) added that social media and education can complement one another if utilized effectively. The technologies that allow these platforms to function are also one of the driving forces behind the impact of this technology on education. As social media takes up a large space in the lives of people, it is important to know how it impacts the student's communication skills. Alrubail (2015) stated that social media's impact does not necessarily mean negative impact. Students use different social media platform such as Instagram, Facebook, Twitter, and etc., in which has a positive impact to students wherein it can lead to effective communication skills.

There are positive effects of social media according to Blaylock (2018), wherein these develops new educational opportunities for students. One of these effects is the way people write or their communication style. Nowadays, messages became shorter and more concise in which people adapted for summarized writing as well. Abbreviation, on the other hand, is common in texting where it has generated controversy among some scholars and cited studies because it has negative effects on literacy skills such as writing skills and accuracy of reading. In line with that, in this era of social media when we are reaching out and engaging more and more people. The more we allow for and understand the importance of all the various levels of communication, the more we can skillfully and effectively use each one.

Gordhamer (2010) stated Five Levels of Effective Communication in Social Media Age. Having "public reply" as level 1: a public interaction which if done correctly, can

often lead to more fruitful direct communication; level 2: for direct message for a private connection; for level 3: more in-depth communication, can be easily forwarded, and sent to numerous people at once; a phone call for level 4 which allows for more immediate back-and-forth; and at level 5: in-person or video chat. Meetings were enhanced by the natural progression of our first digital communication. While at one time face-to-face interactions were the entry point, today, in-person meetings often come at later stages.

Deinbert (n.d.) recognized that digital innovations have been ubiquitous and profoundly ingrained in all things we do in a short period of time. It is neither feasible nor necessary to fully unwind them. Everyone likes, or at least accept, this bargain. Knowledge of social media's ills and unintended consequences is spreading, and particular platforms rise and fall, but social media as a whole remain popular, and the surveillance-based economic system underlying them is constantly expanding.

Social media is like a drug, but what makes it particularly addictive is that it is adaptive Berger (n.d). It adjusts based on your preferences and behaviors, which makes it both more useful and engaging and interesting, and more addictive. Teenagers often remark that they cannot leave Facebook because they would face social ostracization. Employing what Vaidhyathan (2012) calls "infrastructural imperialism" organizations often offer social media as the readiest way to access their services, excluding those who opt out of social media while subtly but powerfully shaping the choices of those who opt in.

Not surprisingly, people with authoritarian inclinations are actively taking advantage of the propitious environment that social media offer (Gunitsky, 2015). A recent survey by the Oxford Internet Institute found that 48 countries have at least one government

agency or political party engaging in shaping public opinion through social media. Authoritarian-minded leaders routinely lambaste “fake news” while at the same time shamelessly pushing patent falsehoods.

Research Literature

These literatures are objective, critical summary of published research literature relevant to a topic under consideration for research. It aims to create familiarity with current thinking to support and further understand the variables of the study.

The word social media has been difficult to define for years, until many platforms appeared, providing individuals with opportunities to monitor all content being generated and empowering them to be content creators and users. In a research study conducted by Yashem and El Badawy (2015), how students use social media with regards to studying. In their research, 92% of respondents use the internet. Others said specifically that, because they can Google equations, they use social media sites for their math homework. Most of them, therefore use social media in a positive way which allows them to do better at school. In line with that, according to Talaue, G. et.al (2018), in education, the use of social media provides students with the ability to obtain more useful information, to connect with learning groups and other educational systems that make education convenient. Tools for social networks provide multiple opportunities for students and institutions to enhance learning methods.

In addition, as cited in the study of Baruah (2012), as a superset beyond social communication, social media has driven by ubiquitously open and flexible networking methods, the way organizations, groups, and people interact has been dramatically

transformed by social media. In the study "Predicting the Future with Social Media" (Asur, S. & Huberman, B. 2010, as cited in Baruah, 2012), they explain how it is possible to use social media material to forecast real-world results.

According to Broughtons and Higgins company (2010) talks at length the policy and practice relating to the use of social media by employees. They were guided by the fact that they had already engaged to some extent with the issue of social media, what it might mean for their organization and how they were going to formulate and communicate a policy. They predominantly specified that social networking requires the use of an online platform or website that allows people to connect via a number of services, typically for a social purpose, most of which are web-based and give people opportunities to interact over the internet, e.g. through e-mail and 'instant messaging'.

Data have shown strong associations between the use of social networking by learners and their personal and group resilience ($P < .05$). Characteristics of social media use, faith, and clinical placement were linked to resilience and the perceived helpfulness of the communication skills ($P < .01$). In conclusion, social networking can and should be used to foster resilience among nursing students as a learning tool. Significant positive correlations have been identified between personal and group use of social media and resilience. The more social media was used by the student, the greater resilience it reported (Washawski, S. et al., 2016).

Regarding students' attitude towards communication skills, the results reveal that there were no significant differences between class teachers and childhood teachers' students in their positive and negative attitudes toward communication skills according to Ihmeideh, F. (2010). It may explain by that there are no formal training sessions in

communication skills during programs of class teachers and childhood teachers' preparation or the lesser number of childhood teacher students' in this study may have been partly responsible for the lack of a significant difference. However, senior students have high positive attitudes toward communication skills than sophomore and junior. This result agrees with a previous study suggested that older, mature students have high positive attitudes toward communication skills training (Rees & Garrud, 2001, as cited in Ilmeideh, 2010). At the same time, sophomore students have high negative attitudes toward communication skills than senior and junior students.

Furthermore, Asemanyi (2015) found out that learners would help enhance their output in and course by being respectful of each other's ideas and adjusting to new teaching methods or techniques used by communication skills in this case. More optimistic attitudes and expectations towards learning must be established by learners. Another recommendation for the research was that the communication skills course helps students a lot in the job market, especially in interviews, so if students take the course seriously and try to work hard on it, it would be helpful. Again in all areas of human life, communication is very important and as such, every person must learn good communication skills. Some of the respondents' feedback on how to enhance the success of students in the course was that it improves their ability to listen, speak, read and write, which will be very useful to them in all their efforts, including writing their thesis and other books.

In the research study conducted by Bakeer (2018), the results of the study showed that the introduction of ICTs and social media had a positive impact on the growth of the writing capacity of students. In addition, undergraduates are pleased with the future achievements in the growth of writing skills by combining ICTs and social media. Writing

is a cognitive instrument used to test memory, reasoning ability and linguistic order to effectively communicate ideas since a text's skillful structure means successful understanding. In pursuance with that, Sámano's study (as cited in Bakeer, 2018), it does not mean that it is possible to learn English or any other language entirely through social media platforms, but it can be used as a medium for creating a good learning atmosphere and a place in an informal setting for practice. Social media also allow topics to be improved because they develop self-motivation on topics seen in class, which reinforces skills such as written expression and creativity in a snowball effect. The findings showed that social media creates a good environment for learning and that teachers can take advantage of the topics seen in the classroom to strengthen them. Sámano found that 78% of teachers believe that the English of their students is enhanced by social media.

Moreover, a study explored the impressions of students of the use of social media in the process of teaching English in a higher institution in Indonesia. Findings from this study indicate that the majority of students displayed a constructive outlook towards the writing classroom and a willingness to use social media. Factors such as large classrooms, the lack of internet training and the lack of equipment could however be potential obstacles to the use of social media in the classroom (Rahman & Salija, 2016, as cited in Bakeer, 2018).

In line with that, a survey of 2,462 advanced placement and national writing project teachers was conducted by Purcell, Buchanan, and Friedrich (2013). They find that digital technologies shape student writing in myriad ways and have also become useful tools for middle and high school students to teach writing. These educators see the internet and digital technologies such as social networking sites, cell phones and texting, generally

facilitating the personal expression and creativity of teenagers, expanding the audience for their written material, and encouraging teenagers to write more frequently in more formats than in previous generations.

On the other hand, Subramanian (2017) associated the influences of social media in interpersonal communication in which verbal skill is included. According to him, you are probably more likely to talk to friends and family via mobile devices than face-to-face in a society where communicating and over-sharing online is the norm. Both contact and interaction barriers have been overcome by social networks, and now one can share his/her opinions and thoughts on a variety of subjects. Students and experts are able to connect and engage with like-minded individuals and may ask for advice and opinion on a specific subject. Another positive influence of the social networking site is to connect people to accomplish a specific goal on a massive forum. In order to bring lasting change to society, this is really necessary.

Synthesis

The mentioned statements in the conceptual and research literature were useful in this current study. Based on the studies presented, the researchers came with the conclusion that technology continue to grow and advance, it has large implications on the way world continues to evolve socially, as well as how people as an individual function in social situations. People develop such skills in keeping up with new methods of socializing and advancing in the professional arena. As well as social media becomes an integral part of a student's full life, as well as people's lives. Using social media would provide students

with the right access to quality information. Social media has been found to provide a broader and quicker means of circulating information not only to an institution's students, but also to the general public.

CHAPTER 3

METHODOLOGY

This chapter contains research design, respondents of the study, data gathering instrument, data gathering procedures, and statistical treatment.

Research Design

The researchers selected the most appropriate research design for this study. This study is quantitative research design as it aims to seek the answer based from numerical data. McCombes S, (2019) stated that descriptive research design aims to accurately and systematically describe a population, situation or phenomenon. The research design is descriptive which will use survey questionnaires that focuses on the impact of social media usage on effective communication skills of Grade 12 Fidelis Senior High students.

Respondents of the Study

The target respondents of this study are Grade 12 students of FAITH Fidelis Senior High. The total population of Grade 12 FSH students is 1155 in which the participants will be 637. Researchers utilize Stratified Random Sampling. According to Nickolas (2020), this is a method of sampling that involves dividing a population into smaller groups—called strata to get the probability and non-probability of our study. In order to calculate the appropriate sample size from the population (Sciencing, 2018), the researchers use the Slovin's formula:

$$n = N / (1 + Ne^2)$$

Table 1.

Distribution of the Respondents

STRAND	POPULATION	SAMPLE SIZE	PERCENTAGE
STEM	591	239	37.5
AMB	229	146	22.9
HUMSS	200	133	20.9
TVL	71	60	9.4
SPORTS	39	35	5.5
ARTSDES	25	24	3.8
TOTAL	1155	637	100

The table 1 presents the strand, population, and sample size to determine the percentage of every strand.

Data Gathering Instrument

In defining the characteristics of a large population, conducting survey is useful. This broad ability, which ensures a more representative sample to gather targeted results to draw conclusions and make important decisions, cannot be given by any other research process (DeFranzo, n.d.). Survey questionnaire will be used as the research instrument of the study. In the detail, the researchers adapted 5 items from the questionnaire of Bashir and Gupta (2018). Those items are about the factor loadings and statements of social networking usage of 6 universities in Jammu and Kashmir. This questionnaire was used to measure how social networking received much attention from academia over the last decade in India. As for the effective communication skills, the researchers adapted 15 items from the questionnaires of Questmeraki (2017), Che, Melor and Ashairi (2019), and Hashim et. al (2013). Those questionnaires are about the effective communication in terms of verbal, non-verbal, and written skills. This will be done to answer our question on how

social media usage impacts the effective communication skills of Grade 12 Fidelis Senior High students.

Data Gathering Procedure

The researchers made a letter of request asking for permission to conduct the study. The letter was forwarded to FAITH Colleges Basic Education School Principal. The researcher will distribute letter of consent to 637 respondents which will come from Grade 12 Fidelis Senior High School. After the approval of respondents, the researcher will give a 20-item survey questionnaire to the respondents. Lastly, the researcher will gather the data from the respondents.

Statistical Treatment

The following tool will be used in this study is weighted mean to identify the effective communication skills of Grade 12 Fidelis Senior High students and their usage of social media. The formula shown below:

$$\bar{x} = \frac{w_1x_1 + w_2x_2 + \dots + w_nx_n}{w_1 + w_2 + \dots + w_n}$$

Where:

x – **The repeating value**

w – **The number of occurrences of x (weight)**

$\bar{x}$ – **The weighted mean**

The scale used for weighted mean is:

Numerical	Range	Verbal Interpretation
4	3.51-4.00	Strongly Agree
3	2.51-3.50	Agree
2	1.51-2.50	Disagree
1	1.01-1.50	Strongly Disagree

APPENDIX A

Letter of intent to the Principal

APPENDIX B

Letter of Validation

APPENDIX C

Research Interview Questionnaire and Letter of Consent

Dear Respondents,

Good day! We are the students from Fidelis Senior High School, Grade 12 ICT taking the Technical-Vocational-Livelihood track. As part of our academic endeavor, we will be conducting a qualitative research study titled: **“Impacts of Social Media Usage on Effective Communication Skills of Grade 12 Fidelis Senior High students.”** We are humbly asking for your time and honesty to answer this interview. We assure you that all the information gathered will be confidential and private and will only be used for the study. Furthermore, a proper disposal of data gathered will be done after the research period.

Thank you very much and we are looking forward for your favorable response. If you have further inquiry, please feel free to contact us through s2019100016@firstasia.edu.ph.

Sincerely,

Chavez, Christell Angelica
Olan, Chatzli Ybeth
Carandang, Cris Andrey
Fabros, Wilson
Pesimo, Jerome
Pitao, Christian

Research Participation Information Form

This is to certify that I am aware of and understand the following conditions for my participation in the study titled: **“Impacts of Social Media Usage on Effective Communication Skills of Grade 12 Fidelis Senior High students”** to be conducted by the aforementioned researchers for their completion of their subject in Practical Research 2 and Inquiries, Investigations, and Immersions.

Signature over Printed Name of Respondent (Optional)

Questionnaire

Name (optional): _____

Grade/Strand: _____

Direction: Read and answer each statement carefully by putting a check mark (✓) on every statement.

What are the social media platforms that you use?

Facebook ____ Instagram ____ Snapchat ____ Twitter ____ YouTube ____

Other/s (please specify): _____

Legend:

4 – Strongly agree 3 – Agree 2 – Disagree 1- Strongly Disagree

	4	3	2	1
I use social media to...				
1. Become more sociable.				
2. Seek help from my teachers and classmates.				
3. Get and share reliable information.				
4. Gain knowledge and learn new things				
5. To follow current trends in different fields				
Verbal Skills				
The use of social media resulted for me to...
