Feasibility Study on the Offering of Technical, Vocational, and Livelihood (TVL) Track for Sustainable Development of a Community in Olandang National High School

Abdul Kadir P. Kambat*, Ava Clare Marie O. Robles

For affiliations and correspondence, see the last page.

Abstract

Few schools have been offering Technical, Vocational, and Livelihood (TVL) tracks, particularly in North Cotabato. One of the means to address this challenge is by offering the TVL track at Olandang National High School (ONHS). For this reason, the study was conducted to determine the viability and capacity of ONHS in the Offering Technical, Vocational, and Livelihood (TVL) Track. Specifically, it determined the feasibility of ONHS in managing TVL Track, market demand, financial, and structural aspects; the level of interest of the respondents in the four TVL strands; and the stakeholders' perception of offering TVL Track. It also determined if there is a significant difference in respondents' perception towards the implementation and sustainability of the proposed TVL Track across geographical areas. Utilizing a descriptive research design, it employed three sets of questionnaires: one was responded to by ONHS teachers and staff, the second by grade 10 students, and the third by community stakeholders. The data were analyzed using weighted mean and ANOVA. The study revealed a high feasibility extent of the capacity of ONHS to offer TVL track, particularly in management and market demand. The students expressed priority interest in TVL-ICT. Community stakeholders believed a high feasibility that offering TVL track would contribute to the sustainable development of their locality. For proper implementation of the TVL Track, the strategic plan developed emphasized strengthening the capacity of ONHS in all aspects of the program.

Keywords: *technical, vocational, and livelihood (TVL) track, management feasibility, market demand feasibility, financial feasibility, and structural feasibility*

Introduction

The Department of Education has been implementing the K-12 Basic Education Curriculum that requires an additional two (2) years in the secondary level, the Grades 11 and 12, which is referred to as the senior high schools (SHS). Completion of SHS is a requirement to be admitted to college. SHS plays an important role as young Filipinos would pursue jobs in countries where companies require a minimum of 16 years of formal education, which is different from the country's old education system having only 14 years to qualify for employment. Moreover, SHS also gives students more time to dig deeper into their chosen specialization should they pursue higher education. However, in case they would not, SHS is the faster way to earn Certificates of Competencies (COCs) and National Certificates (NCs) from the Technical Education Skills Development Authority (TESDA) necessary for both local and overseas work (tesda.gov.ph).

SHS curricula offer four tracks; however, most of the schools in remote areas offer only one (1) or two (2) tracks which limits the choices of incoming grade 11 students (Garrino, 2017). If the city, municipality, or barangay officials desire to improve its socio-economic status, then it must invest in education. The

review of Senior High School programs for both public and private schools revealed that DepEd needs to consider the preferences and aspirations of its students, the demand of the labor market, and the broader interests of Filipino students in approving or terminating SHS track offerings (ABD, 2017).

Currently, Olandang National High School is the only school in the west district of Midsayap implementing Senior High School under the Schools Division Office of Special Geographic Area (SDO-SGA) of the Ministry of Basic, Higher and Technical Education (MBHTE) in the Bangsamoro Autonomous Region in Muslim Mindanao (BARMM) which is located in a remote area in Midsayap, North Cotabato. It offers only one track, General Academic Strand (GAS), which leaves no choice for senior high school students and limits their career path preparation for college, universities, and even workplaces. Limitation in budget allocation is the main reason for this, which can be remedied if there is a will from the local education stakeholders.

For now, the government is pursuing its mandate by implementing TVL to enhance the accessibility of education, especially to those in far-flung areas. However, few schools have been offering Technical, Vocational, and Livelihood (TVL) tracks that have

significant contributions to alleviating socio-economic disparities that are barriers to development (World Bank, 2010). One of the means to address this challenge is by increasing access to education by offering the TVL track at Olandang National High School. Currently, there is no existing school that offers a TVL track. Thus, for this reason, the study was conducted to determine the viability and capacity of Olandang National High School in the Offering Technical, Vocational, and Livelihood (TVL) Track. in offering TVL Track. Likewise, it proposed a strategic plan that can be employed to ensure the proper implementation of TVL to address the school's sustainable development issues and concerns. Moreover, the researchers' strong belief in the complementation of school and community drives them to explore the possibility of offering the Technical, Vocational, and Livelihood (TVL) track as an additional Senior High School track at Olandang National High School.

Research Questions

The study sought to determine the feasibility of offering a Technical, Vocational, and Livelihood (TVL) Track for the sustainable development of a Community in Olandang National High School. Specifically, the study attempted to find answers to the following problems:

1. What was the extent of the capacity of Olandang National High School in offering Technical, Vocational, and Livelihood (TVL) track in terms of:
 - 1.1. Management/Operational Viability;
 - 1.2. Market Demand Viability;
 - 1.3. Economic/Financial Viability; and
 - 1.4. Structural viability (school facilities)
2. What was the priority strand based on the level of interest of the respondents in ONHS in terms of:
 - 2.1. Information and Communication Technology (ICT) Strand;
 - 2.2. Home Economics Strand;
 - 2.3. Agri-Fishery Strand; and
 - 2.4. Industrial Arts Strand?
3. What was the respondents' perception level towards offering the proposed TVL Track for the sustainable development of the ONHS community?
4. Was there a significant difference in respondents' perception of the implementation and sustainability of the proposed TVL Track across geographical areas?
5. What strategic plan could be employed to ensure

proper implementation of TVL to address sustainable development issues and concerns in Olandang National High School?

Literature Review

Offering of TVL Track

The Senior High School Program (SHSP) is part of the K-12 enhanced basic education program approved in 2013, which aimed to develop productive and responsible citizens equipped with the essential competencies, skills, and values for lifelong learning and employment (DepEd, 2018).

Under the SHSP, there were four different tracks as follows: (1) academic, (2) arts and design, (3) sports, and (4) technical and vocational. This program aimed to enable students to possess the necessary skills as they enter college, universities, or even real workplaces (Llego, 2018). Each track is further divided into various strands. Academic Track consists of the following strands: (1.1) Humanities and Social Sciences (HUMSS); (1.2) Science, Technology, Engineering and Math (STEM); (1.3) Accounting Business and Management (ABM); and (1.4) General Academic Strand (GAS).

Arts and Design Track is designed for students interested in enhancing their creativity and artistic expression. The Sports Track is offered for those interested in becoming an athlete, coach, Physical Education (P.E.) teacher, game official, gym instructor, sports trainer, or officiating sports events. Lastly, the students will gain job-ready skills under the Technical-Vocational Livelihood (TVL) Track. Even if they cannot pursue college after completing the SHS curriculum, they can be gainfully employed already. Strands under the TVL track include Home Economics, Industrial Arts, Agri-Fishery Arts, and Information and Communications Technology (ICT) Strand. Students taking the TVL track will receive a National Certificate (NC) from the Technical Educational and Skills Development Authority (TESDA), which they can use for future employment even without pursuing college or university degrees.

Students who choose TVL-Home Economics (HE) may pursue college degree courses related to business, entrepreneurship, culinary arts, hospitality and tourism management, nutrition, food technology, and food management, among others. On the other hand, TVL-ICT is fit for computer-savvy students whose skills are in demand for jobs in technology-revolutionized industries and institutions. Web designing, data

management, communication, radio, and television technology, graphic design, computer programming, animation, online business, IT sales, computer engineering, information technology, and software and network engineering are degree courses that can be pursued by TVL-ICT senior students (Office for Admissions-University of Sto. Thomas OFAD-UST, 2021).

The Malayan Colleges Mindanao, A Mapúa School (MCM, 2021) viewed the Senior High School as preparing students before entering college by equipping them with the global skills, competencies, and knowledge necessary to achieve successful career paths. It is very important to know which track, strands, and specializations to choose upon entering the 11th grade so the student can rightfully choose the path that fits their strength, passions, and skills. Choosing the right strands helps motivate the student to push for his/her future career and makes studying more enjoyable once the chosen strand and interests are met.

The Senior High School Manual of Operations (DepEd Memorandum No. 76, series of 2016) explicitly provides that Senior High Schools have to conduct an external and internal assessment. The external assessment shall include looking into the local government unit's local development (LGU) and mapping the local businesses and available jobs in the community. At the same time, the internal assessment involves mapping existing classrooms, facilities, and resources, reflecting on possible opportunities for partnerships and sponsorships, assessing current teachers' capacities, and considering the Learners' Preference Survey and Parents' Preference Survey. Lastly, in deciding on the program offering, the SHS has to consider the internal and external assessment results vis-a-vis the preferences and needs of the community, current and emerging local job markets, and school capabilities.

In Midsayap, North Cotabato, there are seven identified public Senior High Schools, namely Midsayap-Dilangalen National High School offering STEM, ABM, GAS, TVL; Kimagango National High School offering GAS, TVL; Salunayan High School having GAS and TVL; Villarica High School with Academic and TVL tracks; Patindeguen High School offers Academic track; and Arizona High School with Academic track. Olandang National High School (ONHS), offering only General Academic Strand (GAS), was formerly Olandang High School. It is a DepEd-managed public secondary school located in the west district of Midsayap, North Cotabato (Entrance University, 2019). However, now it is under the political subdivision of the

Special Geographic Areas of the Ministry of Basic, Higher, and Technical Education in the Bangsamoro Autonomous Region in Muslim Mindanao (SGA-MBHTE-BARMM, 2021).

Six (6) private high schools and colleges offer Grades 11 and 12 with varied SHS tracks in Midsayap, North Cotabato. These are the following: I-link College of Science and Technology offers STEM|ABM|HUMSS|TVL; St. Mary's Academy offers STEM, ABM, HUMSS, GAS, TVL; Notre Dame of Midsayap College offers STEM, ABM, GAS, HUMSS, Sports, TVL; Southern Christian College offers STEM, ABM, HUMSS, TVL; Midsayap Community College offers TVL, and St. Jude College of Science and Technology offers ABM, STEM, HUMSS, TVL. Among these private schools, Notre Dame of Midsayap College alone offers the complete tracks.

Management/Operation of TVL Track

The SHS Manual of Operations (DepEd, 2016) required the schools offering SHS to organize committees to include Partnership Focal Persons (PFP), School Inspectorate Team (SIT), School Screening Committee (SSC), Career Advocacy Unit (CAU), Infrastructure Committee (IC), and Enrolment Committee (EC). DepEd Order (DO) 40, s. 2015, appoints the school head as the PFP who is responsible for managing the situational analysis on K to 12 partnership resources, mobilizing resources; pursuing partnerships based on internal and external assessments; coordinating with the immersion teachers regarding the immersion placement for SHS; nurturing partnerships based on the results of the monitoring; and facilitating the evaluation of partnerships for policy actions and sustainability.

The Civil Service Commission (CSC) amended the qualification standards (QS) for the SHS teaching positions in the TVL track by virtue of Resolution No. 1701192, dated August 7, 2017. Aside from meeting the requirements in the amended QS, hiring is subject to existing guidelines on the appointment and promotion of teaching positions. Pursuant to RA No. 1080, eligible secondary level professional teachers shall be considered appropriate for appointment to teaching positions in the SHS. The amended requirements for TVL teacher-applicants is a Technical Education and Skills Development Authority (TESDA) National Certificate (NC) of at least equal level to the course and/or subject to be taught, such as NC-II in SMAW to teach SMAW-NC-II and a certified photocopy of Trainers Methodology Certificate (TMC) I. However, the handicraft course is an exception to this rule as this course requires no NCs

(DepEd Tambayan, 2017).

Further, these training requirements were reduced with a corresponding increase in experience requirements. Trainers Methodology Certificate Level I (TMC I) consists of competencies that a Technical and Vocational Education and Training (TVET) trainer and assessor must achieve. In other words, a TMC I holder is qualified and competent as TVET Trainer/Technical Trainer, Training Facilitator/Coordinator, and Competency Assessor. In contrast, a TMC II holder is a qualified and competent curriculum designer, instructional designer, and training designer/developer. Thus, TMC I is the appropriate training required for the SHS teaching position in the TVL track.

Work immersion is optional for other tracks but not in TVL as it provides SHS TVL learners with opportunities to become familiar with the workplace, stimulate employment, and apply their competence in Computer Systems Servicing in the actual work environment. DM-CI- 2020-00085 was issued to guide the implementation of work immersion during the crisis period. Four schemes are available for TVL track learners undergoing work immersion, including in-school, home-based, community-based, and school and industry tie-up (Galias, 2021).

In 2016, the University of Santo Tomas piloted a study of collaboration between its Basic Education Department and the Center for Industrial and Technical Enterprise as it offers Hotel and Restaurant Services and Electro Mechanic Courses for SHS, where the former hosted the general education subjects and the latter took charge of the technically oriented courses. They called this scheme a hybrid model of a collaborative TVL program as it effectively develops the competency needs in the workplace (Jaca & Javines, 2022).

The implementation of the Technical Vocational Livelihood Track in public senior high schools in the Division of Batangas was evaluated by Ramos (2021) in four aspects, namely the level of adequacy of inputs, level of compliance with the standards of the Department of Education, the extent of implementation of processes, and level of satisfaction with outputs. The study results found adequate inputs in the TVL track, great compliance with DepEd standards, a very high extent of implementation of the processes, and a very satisfying level of satisfaction. In 2017, the Asian Development Bank and the Philippines' Department of Education (ADB, 2017) conducted the Youth Education Investment and Labor Market Outcomes Survey (YEILMOS) involving

students and their families and school heads of select public and private high schools from the National Capital Region (NCR), Ilocos Sur for Luzon, Eastern Samar for the Visayas, and Davao del Sur for Mindanao. The operational issues among the private schools include inadequacy of facilities, lack of teachers, and application requirements to offer different SHS tracks. In contrast, private schools were mainly constrained by the need for student demand or enrollment, application requirements to offer different SHS tracks and inadequacy of facilities. From the study, it is profound that the common issues between the private and public senior high schools are inadequacy of facilities and application requirements in offering different SHS tracks.

Market Demand of TVL Track

Among the various SHS tracks, TVL allows the learners to be awarded a National Certificate II (NCII) to improve employability for SHS TVL learners. These credentials help improve students' labor market outcomes to ensure lifelong access to learning opportunities and future workforce adaptability. Taking the NCII assessment, however, is not a requirement for graduation; whether to acquire National Certification or not is up to the TVL learner (Galias, 2021).

The intent of the law for SHS is the employability of the graduates. On this premise, Orbeta Jr., Lagarto, Ortiz, Ortiz, and Potestad (2019) assessed the likelihood of achieving these objectives by looking into four areas, namely the SHS curriculum and the competencies developed, types of jobs that fit the Grade 12 graduates, private sector perspective on the jobs available and appropriate for the Grade 12 graduates, and policy recommendations for the improvement of the SHS curriculum. Results showed that no schools offered all eight strands, and the majority offered only one strand, with GAS as the most popular, closely followed by TVL.

Moreover, for the type of jobs available for SHS graduates, the entry-level positions mostly require middle-level skills like clerical support staff, crafts and trade workers, machine operators, and sales and services workers. Hiring policies of the companies/firms surfaced that some firms preferred college graduates or college level for skilled middle-level jobs. Others placed SHS graduates on equal footing with JHS completers and the previous fourth-year HS graduates.

Many opportunities await Senior High School (SHS)

students. Firstly, they acquire academic skills required for college education, such as preparing academic papers and reports, making presentations, and undertaking academic research, and soft skills like leadership, teamwork, effective communication, and critical thinking. Secondly, they grow into mature individuals who are ready to decide on the career of their choice. Lastly and more importantly, they have more chances of landing better part-time jobs and even running an enterprise while pursuing their college degrees (Marquez, 2017).

Accordingly, the TVL track develops SHS graduates' practical and industrial skills. However, the unfortunate realities in the SHS program implementation, such as insufficient laboratory rooms, lack of skilled teachers, limited references, lack of learning modules, delayed and limited Maintenance and Other Operating Expenses (MOOE), lack of related training and networking linkages or partnerships with government agencies, industries, and non-government organizations, Egay (2021) said, SHS graduates find it challenging to find a job.

In addition, SHS also prepares students to be emotionally mature to face workforce challenges. Nevertheless, their practical work experience would not suffice the requirements of multi-national companies that set their standards of skills competence and mental and emotional readiness. However, recent DepEd data showed the closure of 51 schools for Grade 11 and 12 students, making 865 shuttered senior high schools affecting 58, 327 students and 4,488 teachers. Most of these schools are from Central Luzon, CALABARZON, and National Capital Region (NCR) due to a severe drop in enrolment and non-compliance to DepEd's guidelines for alternative learning modalities as required under the pandemic.

Roble (2021) studied the socio-demographic profile of TVL (Technical vocational and livelihood) Senior High School students in a private school in the Philippines in terms of their competency level, work immersion performance, and expectations of employers according to the competencies set by regulators. The study revealed no significant difference between the student's competency level and their employers' expected competencies in collaboration, critical thinking, entrepreneurship, environmental literacy, information technology, learning and innovation, lifelong learning, and occupational health. A significant difference was found between the two groups in terms of communication and occupational health. As to work immersion performance when grouped according to

sex and socio-economic status, no significant difference exists except when grouped according to strand and specialization.

Economic/Financial Considerations in Implementing TVL Track

The study by Nacorda, Paras, Olila, Diestro, and Cogal (2019) declared that the Senior High School curriculum operation in the Philippines is faced with different challenges, including investments in human capital, and infrastructures, teaching facilities, and learning resources or materials. These are factors for the ineffectiveness of the system. Their study suggests that the system's shortage or absence of such elements may produce incompetent graduates.

Likewise, Perez (2018) evaluated the operational preparedness of senior high schools in Hagonoy, Bulacan, and found that the senior high schools had high operational preparedness to implement the SHS program. Nevertheless, the implementation is beset with a lack of learning materials and inadequate classroom space. Hence, he recommended that providing resources to schools is necessary to enhance the operational preparedness of the SHS program.

Concerning the challenges in operating SHS, Kemp (2017) acknowledged collaborative initiatives with city and county, service clubs, the non-profit sector, the chamber of commerce, and business and corporate communities, which drew enormous awards, grants, donations, programs, projects, and partnerships flourished in her school district.

In Ghana, there was a glimpse of violence among students in the Senior High Schools. Stephen, Nelson, and Abubakar (2021) investigated the situation. They found that senior high students were used to getting their demands through violent means. These negative behaviors of the students are due mainly to drugs and alcoholism, mental and emotional problems, peer group influence, easy access to weapons, and watching violent movies and programs. The authors concluded that if this menace is not curbed, it would have dire consequences for the nation's socio-political, economic, peace, and stability.

Educational Facilities for TVL Track

Educational facilities, as defined by the Education Facilities Manual (DepEd, 2010), refer to all physical properties of a school, including grounds and the various facilities within the grounds and buildings and facilities inside the school buildings. In brief,

educational facilities constitute school sites, buildings, furniture, and equipment.

The DepEd (2021) data, updated in 2018, published 5,965 public schools operated and funded by the department offering Grade 11 in 2016 and Grade 12 in 2017. The classrooms and facilities of these public schools were constructed under the department's 2014, 2015, and 2016 budgets. Regarding the private high schools, public universities, and colleges, including Philippine schools overseas, there was a total of 4,830 offering Grades 11 and 12.

In the early years of SHS implementation, Mallorca (2017) concluded that most schools need facilities: chairs, books, and equipment for the specialization, especially public schools offering TVL tracks. Those required the government public school to have a higher number of enrollees by providing buildings and more budget for the equipment and materials for teaching to make K-12 a success.

The Asian Development Bank (ADB, 2021) published a report about implementing Senior High School Support Program (SHSSP) in the Philippines. It claims there is ongoing technical support to DepEd in SHSSP disbursement-link indicators (DLIs) monitoring, reporting, and capacity building. Among others, these technical supports include conducting a teacher workforce profiling study to inform teacher deployment and professional development, career guidance and advocacy for teachers, and developing the technical-vocational-livelihood (TVL) national framework for strengthening the TVL track.

On the premise that accessibility of various tracks enables the student to make optimal choices for their future career, Asia Development Bank's (ADB, 2019) study involving public and private high schools in National Capital Region (NCR), Ilocos Sur, Eastern Samar, and Davao del Sur found several issues from public schools which include inadequacy of facilities, lack of teachers, and application requirements to be able to offer different SHS tracks. On the other hand, private schools pointed out the lack of student demand or enrollment, application requirements to offer different SHS tracks, and inadequacy of facilities. Commonly identified public and private SHS issues are the inadequacy of facilities and application requirements. In 2016, education and city officials of the City Government of Baguio constructed the first senior high school building, a 4-storey 8-classroom structure at the San Vicente National High School. A 4-storey 32 classroom building was also constructed on the SHS campus of Irisan National High School,

funded by the Philippine Amusement and Gaming Corporation (PAGCOR), and DepEd funded another 20-classroom school building. These projects aimed to increase the school's capacity to accommodate more senior high school students wanting to avail of the different SHS tracks/strands (The City Government of Baguio, 2020).

Noted as a top-notch home of the topnotchers, St. Theresa's College Quezon City (STC QC, 2016) equipped its senior high school with fully air-conditioned classrooms, multimedia equipment, and an online learning platform and WiFi connection. Besides, it has complete laboratory facilities for speech, computer, chemistry, biology, and e-zone. She upholds the motto "Education in and through virtue, science, and art." This means that virtue, science, and art are the seeds that STC QC carefully plants in the student's mind and heart.

Pertaining to physical facilities, Akomolafe and Adesua (2016) found that it has a significant relationship with enhancing the level of motivation and academic performance of senior secondary school students. This study, conducted in South West Nigeria, suggests that more high-quality physical, human, and material resources available in public tend to increase students' motivation towards learning. Hence, fund allocation of funds for a conducive public school is critical to improving the academic performance of public schools.

Furthermore, these authors claimed that most secondary schools lack the facilities necessary to enhance effective teaching and learning. As a result, little is expected from students in terms of academic performance. A similar study was conducted in Silame Local Government, Sokoto, which revealed more or less the same findings. There were inadequate instructional materials and poor school facilities. A positive correlation was found between instructional materials and school facilities on students' academic performance. The inadequate and low-quality instructional materials and school facilities impedes teaching and learning, thus negatively impacting academic performance (Joseph, Valentina, & Motunrayo, 2015).

Interest in TVL Track and Strands

The SHS program is envisioned to produce graduates prepared for higher education capable of being entrepreneurs or working even without a college degree. The pioneer graduates of SHSP were close to 1.2 million, and 480,000 finished the TVL track. With

TVL, some senior high students have already landed a job before completing their track. This first batch of SHS graduates theoretically possesses 93 percent of the competencies the nation's industries need, such as critical thinking and problem-solving skills (DepEd, 2018). For SY 2020-2021, DepEd's national enrollment data covering public and private schools reported 2, 836, 518 enrollees in Senior High School (Malipot, 2020).

Harke (2009) identified some of the academic, personal, and social expectations that senior high schools have about college and the correlation of these expectations by gender, ethnicity, geographic region, and GPA. The study disclosed that senior high school viewed college as a repetition of high school, for faculty to get to know them more profoundly and that they will be doing well in class. There was a pattern of unrealistic levels of self-confidence to succeed. Moreover, no difference is found between expectations and their gender, ethnicity, geographic region, or GPA. The finding affirmed that senior high school students must be guided in setting realistic expectations to have opportunities for greater success.

Similarly, Llego (2018) said that finding the right track and strand and where to enroll would be helpful to Grade 10 completers as they embark on a new academic journey. To be able to choose the right track, stand, and specialization, the student must first assess his/her strengths, weaknesses, interests, and skills to have a fruitful academic journey and a successful career in the future.

According to John Holland, as cited by CIIT (2021), most people have one of six personality types: realistic, investigative, artistic, social, enterprising, and conventional. Each personality has a compatible career path. TVL tracks fit realistic people because they are doers. STEM strand of the Academic track fits investigative people because they are thinkers and inclined toward theory-heavy jobs such as law and medicine. Arts and Design track and sports tracks apply to artistic types of imaginative and creative people. GAS or HUMSS strands of the Academic Track are best for social ones as they love working with people. ABM strand of Academic Track would be the right choice for enterprising people, considering they are risk-takers and have the courage to influence others. Academic and TVL tracks are fit to conventional ones for they are particular with keeping structure and order (CIIT College of Arts and Technology, 2021).

A process evaluation to determine the extent of

implementation of the SHS program and identify best practices, issues, and areas for improvement was conducted by Brillantes, Orbeta, Francisco-Abrigo, Capones, & Jovellanos (2019). The study reveals exceeding enrollment as the foremost notable gain, credited to DepEd, who launched SHS with a good start despite its enormous needs and challenges. The study also found that the program and program support were well-organized. However, it also noted that building school facilities, hiring qualified teachers, and delivering teaching materials were incomplete when SHS was launched. There was a lack of awareness and understanding for some stakeholders about the program's needs considering that active participation of relevant stakeholders beyond the school system, such as local government units (LGUs) and other institutions, is expected. Although explicitly stated in the Manual of Operations, few collaborations happened. Collaboration depended on the individual initiatives of schools, LGUs, and industries.

Moneva and Malbas (2021) studied the influence of preference for a Senior High School track among Grade 10 students in terms of gender, socio-economic status, average academic grades, nature of parent's occupation, and strand and the level of influence of the respondent to be associated with preferences in choosing a track in senior high school in terms of family influence-decision; peer influence; financial condition; and employability. The results showed that the factors fairly influenced the preferences of the senior high school. On the gender aspect, socio-economic status and parent's occupation were the factors considered by male students in choosing their SHS track. In contrast, among the female students, it is their peers.

Community Stakeholders' Support

Partnership-building (PB) is underscored in the implementation of Senior High School (DepEd, 2016). The primary goal is to improve the capability of the DepEd in implementing the K to 12 Program. DepEd hopes the partners could provide work immersion opportunities, hands-on expertise, additional resources, and livelihood opportunities for senior high school graduates. This partnership-building is meant to help students qualify for livelihood or work opportunities other than benefiting the partner. Furthermore, the manual of operation provides that Senior High Schools offering TVL tracks but lack facilities, equipment, or materials, need to establish partnerships with Technical-Vocational Institutions for co-delivery of TVL specializations.

The ADB (2016) report disclosed that aside from funding problems, difficulty in hiring specialized teachers affected the school's ability to offer particular SHS tracks and strands. Accordingly, the remedy is for DepED, schools, and other stakeholders to explore and collaborate on options in addressing or at least mitigating the various constraints in offering different SHS tracks and strands. Kemp (2017) firmly believed that the unity of schools and community help learners reach their maximum potential. When teachers, parents, businesses, non-profits, and service clubs work together, they make a difference in students' lives because there is complementation and reinforcement of values, culture, and learning opportunities. Accordingly, a wide array of learning can be experienced in the community, enabling learners to grow socially, interact and participate in community affairs. Hence, the school and community working hand-in-hand give learners the utmost welfare to prepare them to face future life challenges (Garrino, 2017).

Likewise, DepEd (2015) cited the Australian Council for Educational Research (ACER) on Alternative Learning Systems (ALS), saying that partnerships which are well-planned, sustainable, collaborative, and based on a mutual sharing of expertise, knowledge, resources, and skills, are effective and can make an impact. Moreover, schools and industries mutually benefit from the partnerships. While schools provide the educational foundation, industries link the knowledge to training, apprenticeship, career mentoring, skills-specific training, and hands-on experience for learners.

DepEd Order No. 40., series of 2015, outlines the guidelines for K to 12 Partnership-Building Efforts to enable students to pursue lifelong education and training for employment or entrepreneurship. In the Senior High School Manual of Operations Volume One (SHS ManOp v.1), models of Partnership-Building Activities (PBAs) are enumerated, which include work immersion, hands-on expertise, additional resources, and livelihood opportunities that were aimed at developing the skills and competencies of learners deemed in demand in the local market. Further, DepED Order No. 40, s. 2015 provides a simple guide to doing PBA and the tools needed, such as external assessment (EA) tools, potential partner qualification tools, and a sample for forging a memorandum of agreement (MOA). The steps in doing PBAs include the following: (1) conducting internal and external assessments (IEA); (2) identifying potential partners; (3) engaging with potential partners; and (4) executing a memorandum of

agreement (MOA).

Both learners, their families, and schools greatly benefit from partnership programs. For the students and their families, partnerships helped improve attendance in school programs, facilitated accessibility to various learning opportunities with new approaches to teaching and learning, facilitated information sharing, and gave parents options to support their students' learning. For the schools, a school-community partnership complements the academic curriculum to provide more services and enrichment activities (Little, 2011).

Real experiences proved school-community partnerships beneficial. The study of Bermudez and Punzalan (2018), which involved the education stakeholders in the planning and decision-making process in designing programs, projects, and activities for the learners found to have provided intrinsic value in building a functional society, promoted common good, communication, and connection, and developed a sense of community hood in enhancing learning opportunities for children.

Methodology

The descriptive-correlation research design was employed in this study. It was descriptive as it would describe the capacity of Olandang National High School (ONHS) to offer a Technical, Vocational, and Livelihood (TVL) Track in addition to its present General Academic Strand (GAS) in terms of management/operation, market demand, economic/financial aspect, and structural aspect. It also described the level of interest of Grade 10 students in enrolling in TVL strands as well as the perceptions of the stakeholders as to the implementation and sustainability of the proposed TVL Track. This design simply described individual variables' characteristics as they occur in the natural setting (Gravetter et al., 2009).

Participants

There was a total of twenty-nine (29) teachers, two (2) administrative assistants, and one (1) school head in Olandang National High School who answered Survey Questionnaire 1. All of the 183 Grade 10 students responded to Survey Questionnaire 2. A total of 284 community stakeholders (households) out of 1,036 households were strategically chosen to be respondents of the Survey Questionnaire 3. This sample population was based on the calculation results from raosoft.com.

The household member-respondents were of legal age.

Instruments of the Study

The study utilized three (3) sets of survey questionnaires. Teachers and administrative staff of ONHS answered the first part, the Grade 10 students responded to the second one, and the community stakeholders answered the third part.

Part 1, the survey questionnaire contained items that responded to the viability of management/operation, market demand, economic/financial aspects, and structural/physical facilities to be rating based on a Likert scale of 1-5, where 5 is Very High Compliance, 2 is High Compliance, 3 is Satisfactory Compliance, 2 is Fair Compliance, and 1, No Compliance.

The Grade 10 students responded to part 2 of the survey questionnaire. They were made to choose 3 TVL strands they were interested in upon entering Grade 11. Their first choice is number 1 and 3 as their last choice among the four TVL strands.

Part 3 of the survey questionnaire was intended for community stakeholders, where the intention was to gauge their perception of the capacity of Olandang National High School to offer and sustain the implementation of the Technical, Vocational, and Livelihood (TVL) Track.

Procedure

The researcher provided consent letters needed before conducting the study. The letter was addressed to the Schools Division Superintendent of the SGA-MBHTE Division Office in Midsayap, Cotabato. Upon approval from the division office, permission letters were sent to the respective respondents, namely the School Head and Administrative Staff of ONHS, Teachers, parents/guardians of the Grade 10 students, and Community Stakeholders. When permission was granted, the researcher administered the conduct of the survey. During the survey, the researcher explained the purpose of the study and asked the respondents to sign the consent form.

Ethical Considerations

The study required ethical considerations as it would ask the opinion of the teachers, administrative staff, and community stakeholders on matters pertaining to a government institution, Olandang National High School. Thus, permission to conduct the study from the Schools Division Superintendent was sought. Likewise, since the study involved the responses of

Grade 10 students, their parents' consent was vital. Hence, prior to administering the instrument, the Parent's Consent was secured. The researcher secured an ethics clearance/approval from the Mindanao State University - Institutionalized Ethics Review Committee before conducting the survey. Respondents' identities and responses were treated with utmost respect and confidentiality.

Results

Feasibility of Offering Technical, Vocational, and Livelihood (TVL) Track in Olandang National High School

Table 1 shows the extent of Olandang National High School's capacity to offer the Technical, Vocational, and Livelihood (TVL) track. Among the indicators, the feasibility of offering the TVL track in ONHS due to Market demand got the highest mean rating ($M=4.15$). This is followed by its capacity to manage or operate TVL ($M=4.08$). Among the indicators, its capacity to provide educational facilities got the lowest mean, described as moderately viable ($M=3.04$).

In terms of management or operation, organizing relevant committees in ONHS got the highest mean described as highly viable ($M=4.28$). This is followed by its capacity to manage the situational analysis on K to 12 partnership resources ($M=4.22$). In contrast, its capacity to access technical support for developing the technical-vocational-livelihood (TVL) national framework got the lowest mean of 3.88. The mean of 4.08 described the extent of the capacity to offer Technical, Vocational, and Livelihood (TVL) Track in ONHS as highly feasible.

As to Market demand, the capacity of the ONHS to gainfully be employable in the workplace because of TVL credentials/ NCII got the highest mean ($M=4.19$), described as highly viable. However, its holders of TVL strands most preferred in companies/industries got the lowest mean ($M=4.06$). Likewise, the mean of 4.15 indicated that the extent of market demand for offering TVL Track in ONHS is highly feasible.

Regarding Economic/Financial Aspects, the ONHS capacity to access/request Local Government Funding Support got the highest mean described as highly viable ($M=3.64$). This indicator is followed by the ability of ONHS to access/request from DTI and DOST, described as highly viable ($M=3.50$). ONHS can access/request funding support from the Bureau of Aquatic Resources and Fisheries got the lowest mean

described as moderately viable (WM=3.22). The overall mean of 3.43 indicated that the extent of offering TVL Track in ONHS is moderately viable in terms of economic/financial aspects.

Based on educational facilities, the ONHS's capacity to provide chairs and tables got the highest mean (M=3.56), described as highly viable. In contrast, its ability to provide Equipment for Specializations got the lowest mean described as less viable (M=2.16).

Overall, results revealed that offering the TVL track in ONHS is highly feasible, with an overall mean of 3.68. This implies that the school can offer the TVL in response to satisfying the community's needs. This finding supports the study of Medalla (2021) that SUCs are mandated to provide quality services that will help the community realize its needs for a progressive society.

Table 1. *Extent of Capacity of Olandang National High School in offering Technical, Vocational, and Livelihood (TVL) track*

<i>A. Management/Operation</i>	<i>WM</i>	<i>Description</i>
1. Olandang National High School has organized relevant committees.	4.28	Highly Viable
2. The school head, as the PFP, can manage the situational analysis of K to 12 partnership resources.	4.22	Highly Viable
3. ONHS can access the Senior High School teaching applicants who are holders of TMC-I as the least required in the TVL track.	4.09	Highly Viable
4. ONHS can access the industries for work immersion which is optional for other tracks but not in TVL.	3.94	Highly Viable
5. ONHS can access technical support for developing the technical-vocational-livelihood (TVL) national framework.	3.88	Highly Viable
Mean	4.08	Highly Viable
<i>B. Market Demand Viability</i>	<i>WM</i>	<i>Description</i>
1. TVL tracks are gainfully employable in the workplace because of National Certificate (NC) II.	4.19	Highly Feasible
2. TVL credentials improve students' labor market outcomes as they are engaged in lifelong learning opportunities and enhance their adaptability in the workforce.	4.19	Highly Feasible
3. Holders of TVL strands are most preferred in companies/industries.	4.06	Highly Feasible
4. TVL graduates are hired mostly for middle-level skills like clerical support staff, crafts and trade, machine operators, and sales and services staff.	4.19	Highly Feasible
5. TVL graduates are treated on equal footing with Junior High School completers and the previous fourth-year HS graduates.	4.13	Highly Feasible
Mean	4.15	Highly Feasible

<i>C. Economic/Financial Aspects</i>	<i>WM</i>	<i>Description</i>
1. Olandang National High School can easily access/request the Department of Education for fund allocation.	3.47	Moderately Viable
2. ONHS can access/request Local Government Funding Support (e.g., Teacher's salary, classroom building, etc.)	3.64	Highly Viable
3. ONHS can access/request from DTI and DICT.	3.31	Moderately Viable
4. ONHS can access/request from the Department of Science and Technology (DOST)	3.50	Highly Viable
5. ONHS can access/request from the Bureau of Fisheries and Aquatic Resources	3.22	Moderately Viable
Mean	3.43	Moderately Viable
<i>D. Structural Viability: School Facilities (ONHS can provide....)</i>	<i>WM</i>	<i>Description</i>
1. Infrastructures for TVL usage	3.28	Moderately Viable
2. Existence of TVL teaching facilities	3.13	Moderately Viable
3. TVL Learning resources or materials	3.06	Moderately Viable
4. Chairs and Tables	3.56	Highly Viable
5. Equipment for Specializations.	2.16	Less Viable
Mean	3.04	Moderately Viable
Overall Mean	3.68	Highly Feasible

Priority Strand based on the Level of Interest of the Respondents

Data revealed that the highest among the strands is in Information and Communication Technology (ICT), with 92.22% interested in enrolling at ONHS. This is followed by Home Economics with 86.11%. The Industrial Arts strand was rated as the third priority of the respondents, with 78.89%. The Agri-fishery strand is the least they prefer to enroll among the strands.

Table 3. *Priority Strand based on the Interest of Grade 10 students in Olandang National High School*

<i>Strands of TVL Track</i>	<i>Frequency</i>	<i>%</i>	<i>Rank</i>
Information and Communication Technology (ICT) Strand	166	92.22	1st
Home Economics Strand	155	86.11	2nd
Agri-Fishery Strand	96	53.33	4th
Industrial Arts Strand	142	78.89	3rd

The choice of TVL-ICT being the highest stand is due to the accelerating technological advances of the time and fit for the computer-savvy young generation. From this strand, perhaps the students' interest is to pursue jobs that are employable in technology-revolutionized industries and institutions. They can get courses in line with web designing, data management, communication, radio, and television technology,

graphic design, computer programming, animation, online business, IT sales, computer engineering, information technology, and software and network engineering (Office for Admission-University of Sto. Tomas OFAD-UST, 2021).

Perception of Community Stakeholders toward the Offering of TVL Track for Sustainable Development of a Community in Olandang National High School

Table 4 shows the perception of community stakeholders toward the offering of the TVL track for the community's sustainable development in ONHS. Among the indicators, its capacity to maintain and improve the existing educational facilities got the highest mean, described as very highly feasible ($M=4.56$). This is followed by its ability to manage a TVL Track effectively ($M=4.50$).

Table 4. *Perception of Community Stakeholders toward the Offering of TVL Track for Sustainable Development of a Community in Olandang National High School*

Indicators	Weighted Mean				Mean	Description
	East	West	North	South		
1. ONHS can manage a TVL Track effectively.	4.63	4.58	4.54	4.21	4.50	Highly Feasible
2. ONHS is capable of supervising the operations of a TVL track.	4.25	4.17	4.20	4.25	4.22	Highly Feasible
3. The TVL track is in demand in Olandang and neighboring communities.	4.13	4.01	4.17	4.21	4.13	Highly Feasible
4. There is a growing senior high school population in Olandang who may be interested in taking any strand of TVL track.	4.04	4.18	4.14	4.17	4.13	Highly Feasible
5. The government could adequately provide the financial appropriation for the program offering.	4.13	3.86	4.13	3.89	4.00	Highly Feasible
6. ONHS has the potential to cope with economic risks in operating TVL offerings.	3.77	4.18	4.23	4.23	4.10	Highly Feasible
7. ONHS has the essential educational facilities like buildings, classrooms, and equipment required to offer a TVL track.	4.61	4.66	4.45	4.34	4.50	Very Highly Feasible
8. ONHS is capable of maintaining and improving the existing educational facilities.	4.73	4.66	4.39	4.46	4.49	Very Highly Feasible
9. ONHS has teachers who have the expertise in handling the strands of the TVL track.	4.08	4.20	4.10	4.14	4.13	Highly Feasible
Overall Mean	4.26	4.28	4.26	4.21	4.26	Highly Feasible

Nonetheless, among the indicators, the government's capacity to adequately provide a financial appropriation for the program offering got the lowest mean but was still described as highly feasible ($M=4.00$). The findings mean that the community stakeholders believed that ONHS could maintain and improve its facilities if offered a TVL track. This finding implies that the meager government budget is a common challenge when putting up a new educational track. This is since the education sector in the Philippines receives only 3% of the total gross domestic product, thus hindering quality education as

it dramatically affects school expenditures for school buildings, facilities, and learning materials, among others. Nevertheless, Philippine laws and policies on education, such as Republic Act 9155, otherwise known as the Governance of Basic Education Act of 2001, promote maximum participation and active involvement of the community to ensure sustainable growth and development in education (Bermudez & Punzalan, 2018).

Significant Difference in the Perception of Respondents towards the Feasibility of Implementing the proposed TVL Track across geographical areas

Table 5 shows the ANOVA result that tests the significant difference in respondents' perception of the feasibility of implementing the proposed TVL Track across geographical areas.

Data revealed that the perception of respondents towards the feasibility of implementing the proposed TVL Track differs across geographical areas as indicated in the F-ratio of 0.63 and p-value of 0.037 for ICT Strand; F-ratio of 0.58 and p-value of 0.019 for HE Strand; F-ratio of 0.28 and p-value of 0.010 for Industrial Arts Strand; and F-ratio of 0.63 and p-value of 0.037 for Agri-Fishery Strand.

These results lead to the rejection of the null hypothesis that there is no significant difference in the respondents' perceptions. The study's result reveals that respondents' perception of the feasibility of implementing the proposed TVL Track across geographical areas differs across geographical areas since they vary in their perceptions as to the readiness to offer the TVL track. The study confirms the study of Medalla et al. (2021) that identifying an institution's readiness is paramount since people's geographical areas may influence their decision regarding offering TVL courses.

Table 5. *Significant Difference in the Perception of Respondents towards the Feasibility of Implementing the proposed TVL Track across geographical areas*

Indicators	Geographical Areas				F-ratio	p-value	Remark
	East $\bar{x}$	West $\bar{x}$	North $\bar{x}$	South $\bar{x}$			
ICT Strand	4.25	4.17	4.25	4.20	0.63	0.037	Significant
Home Economics Strand	4.23	4.18	3.77	4.23	0.58	0.019	Significant
Industrial Arts Strand	4.17	4.13	4.08	4.13	0.28	0.010	Significant
Agri-Fishery Strand	3.89	3.86	4.13	4.13	1.43	0.005	Significant

Strategic Plan to Ensure the Proper Implementation of TVL Track Offering in Olandang National High School

Vision

We dream of Filipinos who passionately love their country and whose values and competencies enable them to realize their full potential and contribute meaningfully to building the nation.

Mission

To protect and promote the rights of every Filipino to quality, equitable, culture-based, and complete primary education where students learn in a child-friendly, gender-sensitive, safe, and motivating environment; teachers facilitate learning and constantly nurture every learner; administrators and staff, as stewards of the institution, ensure an enabling and supportive environment for effective learning to happen; and family, community and other stakeholders are actively engaged and share responsibility.

Goal

To sustain quality education by upgrading and offering TVL as an additional track for Grades 11 to 12 students.

Objectives

To cater to the desire of the Grade 10 students to take up the TVL track and to strengthen the capacity of Olandang National High School in offering TVL as an additional track for senior high school students with the Information and Communication Technology (ICT) strand, the Home Economics (HE) strand, and Industrial Arts Strand. Information and Communication Technology (ICT) strand, Home Economics Strand, and Industrial Arts Strands.

Implementation Plan

Table 6. *Gantt Chart for the Implementation of the Strategic Action Plan*

Activities	Time Frame	Persons Involved	Expected Outcome
1. Presentation of the Result of the Study to the School Head and Teachers of ONHS	September 2022	Head and Teachers of ONHS	Adoption of the Result of the Study
2. Preparation of Proposal to Offer TVL in School Year 2023-2024 covering ICT, Home Economics, and Industrial Arts	October to November 2022	School Head and Consultant or Technical Writer	Draft of Proposal to Offer TVL
3. Submission of Proposal to DepEd	November 2022	School Head DepEd	Revision if necessary DepEd Issued Order to Offer TVL
4. Approval	December 2022	DepEd	
5. Preparation of Requirements for Offering TVL Track	January 2023	School Head and Teachers	Completed pertinent documents
6. Public Announcements and Advertisements	March 2023	School Head	Created public awareness Ensured teachers' TVL competence
7. Recruitment of Teachers	April 2023	DepEd School Head	

The study aimed to determine the feasibility of offering a Technical, Vocational, and Livelihood (TVL) Track for Sustainable Development of a Community in Olandang National High School. The study was delimited to find out the extent of the capacity of the ONHS in offering the TVL track in terms of management/operational viability, market demand viability, economic/financial viability, and structural viability (school facilities). Moreover, it determined the priority strand based on the interest of grade 10 students in enrolling in TVL with the Information and Communication Technology (ICT) strand, Home Economics (HE) strand, Agri-Fishery Strand, and Industrial Arts Strand. Likewise, the perception of the community stakeholders towards the implementation and sustainability of the proposed TVL track was identified.

Based on the study's findings, the extent of the capacity of ONHS to offer the TVL track is Highly Feasible, as revealed in the overall mean of 3.68. However, it has a high extent of viability in managing/operating the TVL track (M=4.08) and market demand (M=4.15). In addition, it has a moderate extent of viability in terms of economic/financial aspects (M=3.43) and educational facilities (M=3.04).

With regards to identifying the priority strand based on the interest of Grade 10 students in enrolling in TVL strands, 92.22% of them will opt to enroll in the Information and Communications Technology (ICT) strand, while enrolling in Agri-fishery Strand is the least they prefer to enroll (53.33%). As to the perception of the community stakeholders toward the offering of the TVL track for the community's sustainable development in ONHS, they considered the TVL track offering as highly feasible, as revealed in the overall mean of 4.26. This may be due to their understanding that offering this strand is beneficial and a great avenue for more employable opportunities.

Results also showed that the perception of respondents towards the feasibility of implementing the proposed TVL Track across geographical areas differ across geographical areas since they vary in their perceptions as to the readiness to offer the TVL track as indicated in the F-ratio of 1.43 and p-value of 0.005 for ICT Strand; F-ratio of 0.58 and p-value of 0.019 for HE Strand; F-ratio of 0.28 and p-value of 0.010 for Agri- Fishery Strand; and F-ratio of 0.63 and p-value of 0.037 for Industrial Arts Strand. Lastly, a strategic plan was

crafted to ensure the proper implementation of TVL that addressed the sustainable development issues and concerns in Olandang National High School, Midsayap, North Cotabato.

Conclusion

Based on the findings, the following are the conclusions of the study: First, the results revealed that the extent of the capacity of ONHS to offer the TVL track is Highly feasible. Secondly, regarding the interest of Grade 10 students to enroll in TVL strands, most of them will opt to enroll in the Information and Communications Technology (ICT) strand, while enrolling in Agri-fishery Strand is the least they prefer to enroll. Thirdly, as to the perception of the community stakeholders toward the offering of the TVL track for the community's sustainable development in ONHS, they gauged that the TVL track offering as highly feasible. Fourthly, the respondents' perceptions of the feasibility of implementing the proposed TVL Track across geographical areas significantly differ. Fifth, financial support to acquire or build school facilities for TVL is highly needed to implement the offering of TVL suitably. Lastly, a strategic plan was framed to ensure the proper implementation of TVL that addressed the sustainable development issues and concerns in Olandang National High School.
